

~ *Victoria Marine Scanner Frequency List* ~

The following is a list of the frequencies scanned and provided by me through the Victoria Marine scanner feed available through broadcastify.com and various scanner apps.

The scanner is located in James Bay, Victoria BC, Canada and provides a continuous feed of non-autonomous marine, seaplane, and Helijet radio traffic receivable from my location. You will hear a lot of traffic from the pilot boats who drop off marine pilots to help ships navigate in the Strait of Juan de Fuca. In months with nicer weather you may also hear cruise ships and the whale watching boats call in whale sightings. The frequencies marked L/O are skipped by the scanner because they are autonomous or prone to extended interference.

Requests for frequencies to be added can be made by contacting me through the broadcastify.com page for this feed.

1 165.050	34 156.225	66 161.700
2 156.100	35 156.275	67 161.750
